

Introducing UL DESK Our Comprehensive Front End Solution

- ULLINK now offers all of its solutions in one consolidated Front-end screen
- UL DESK features a customizable and intuitive interface
- Software and upgrades are now easier to install

UL DESK is a cross-asset business front-end which provides access to all of the features of ULLINK's multiple business solutions from a single screen. UL DESK enables you to handle sales, trading, risk, best execution, client static data, compliance and fees as well as settlement information. UL DESK is an evolution of our current multiple front-ends (UL TRADER, UL IRIS, UL SMART) into a single, intuitive, all-encompassing workstation. It allows you to further leverage staff skills and enhance overall productivity in the Front Office.

The UL DESK toolbar offers immediate access to the functionality you need across a broad spectrum of features. Each user can completely customize his front-end according to his individual needs and preferences.

Developed using C# and .Net, UL DESK provides better performance, faster implementation and easier support. In particular, deployment and upgrades are automated, therefore optimizing maintenance tasks across the floor.

To learn more about UL DESK business features, please visit its dedicated webpage:
