

MARVELSOFT

Since 2004, our engineers have worked hard to build practical, dependable software for institutional traders in Europe, the Americas, and Asia. Whether you need algorithmic trading engines, quantitative analytics, monitoring or compliance software, we can deliver the solution you need at the standard you expect.

SOPHISTICATED

The key to the success of our software is the sophistication of our low-latency modular design. Modularity allows us to integrate our solutions with any OMS, market data feed, or global market. It also makes it possible for us to provide a consistent trading experience that enables you to trade multiple asset classes across multiple markets without giving up your unique trading edge.

ECONOMICAL

We design solutions that can accommodate any budget. Unlike many bundled offerings, our solutions are all available a la carte. This allows you to handpick only those functionalities that suit your trading style and needs. Our modular approach means you buy the right solution to satisfy the right need at the right price.

EFFICIENT

Our solutions allow you to mix and match based on your strategy and budget. Choose our off-the-shelf high-touch or low-touch products for areas where you want to match the industry's best practice, then let us work with you on custom software in those markets where you see an opportunity for a comparative advantage.

Our commitment to a dynamic, client-centered approach to scope capturing, implementation and training puts us one step ahead of our competition.

DEPENDABLE

We have offices in New York, Paris, London, Lugano, and Hong Kong. Choosing us as your IT partner means a wide-awake Marvelsoft engineer and support technician is always available when you have a question.

We also monitor regulators worldwide to make sure our solutions always comply with emerging regulatory and technical standards, such as those introduced in Europe by MiFID II and in China by CSRC.

For over a decade, we have successfully deployed platforms across the globe. Our client satisfaction derives from true commitment, trust, and years of expertise. Together, we undertake a series of projects each year, delivering a range of high-touch and low-touch game-changing solutions.
